H/W 10 will be posted soon

Quiz this Wed.

Midterm 3 Wed. 11/20 in class

Recall:

Def: Let $G = (V_1, E_1)$ and $H = (V_2, E_2)$ be simple graphs. A function $f: V_1 \rightarrow V_2$ is an isomorphism if

a) f is a bijection

b) $f(a)$ and $f(b)$ are adj. if and only if a and b are adj.

If any isomorphism exists, G and H are isomorphic

Two ways to show two graphs are isom.

1) Find an isomorphism (examples last time)

2) Show that the adjacency matrices are the same for some ordering of the vertices

(always same ordering on rows & cols!)

Ex 11:

G

H

$$\text{Adj}_G = \begin{matrix} & v_1 & v_2 & v_3 & v_4 & v_5 & v_6 \\ \begin{matrix} v_1 \\ v_2 \\ v_3 \\ v_4 \\ v_5 \\ v_6 \end{matrix} & \begin{bmatrix} 0 & 1 & 0 & 1 & 0 & 0 \\ 1 & 0 & 1 & 0 & 0 & 1 \\ 0 & 1 & 0 & 1 & 0 & 0 \\ 1 & 0 & 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 1 & 0 & 1 \\ 0 & 1 & 0 & 0 & 1 & 0 \end{bmatrix} \end{matrix}$$

$$\text{Adj}_H = \begin{matrix} & w_1 & w_2 & w_3 & w_4 & w_5 & w_6 \\ \begin{matrix} w_1 \\ w_2 \\ w_3 \\ w_4 \\ w_5 \\ w_6 \end{matrix} & \begin{bmatrix} 0 & 0 & 0 & 1 & 1 & 0 \\ 0 & 0 & 1 & 0 & 1 & 1 \\ 0 & 1 & 0 & 1 & 0 & 0 \\ 1 & 0 & 1 & 0 & 0 & 1 \\ 1 & 1 & 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 & 0 & 0 \end{bmatrix} \end{matrix}$$

Not the
same

But... put the vertices in a different order, and

$$\begin{array}{c} w_6 \quad w_2 \quad w_3 \quad w_4 \quad w_1 \quad w_5 \\ \begin{array}{c} w_6 \\ w_2 \\ w_3 \\ w_4 \\ w_1 \\ w_5 \end{array} \left[\begin{array}{cccccc} 0 & 1 & 0 & 1 & 0 & 0 \\ 1 & 0 & 1 & 0 & 0 & 1 \\ 0 & 1 & 0 & 1 & 0 & 0 \\ 1 & 0 & 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 1 & 0 & 1 \\ 0 & 1 & 0 & 0 & 1 & 0 \end{array} \right] \end{array}$$

So G and H are isomorphic.

§10.4: Connectivity

Def: A path is an alternating sequence

$$v_0, e_1, v_1, e_2, \dots, e_n, v_n$$

$v_i \in V$, $e_i \in E$ e_i has endpoints v_{i-1} & v_i

If no repeated edges, the path is simple

If $v_0 = v_n$, it is a circuit

If G is a simple graph, don't need to write the edges, since they're implied

* Note: terminology matches Rosen, different from other sources

Class activity:

Which of the following are paths? Circuits?

Simple paths/circuits?

a) $u, f, w, j, x, i, v, e, u$

d) u, w, x, y, w, x, y

b) u, w, x, v, u

e) u, f, w, f, u, f, w

c) $u, e, w, i, x, j, v, f, u$

Def: Paths/circuits are the same in digraphs except they must follow the arrow

Class activity:

Which of the following are paths? Circuits?

Simple paths/circuits?

a) $u, f, w, j, x, i, v, e, u$

d) u, w, x, y, w, x, y

b) u, w, x, v, u

e) u, f, w, f, u, f, w

c) $u, e, w, i, x, j, v, f, u$

Def: a) A graph is connected if there is a path from every vertex to every other vertex

b) A digraph is strongly connected if there is a path from every vertex to every other vertex

c) A digraph is weakly connected if there is a path from every vertex to every other vertex in the underlying graph (erase the arrows)

d) A cut edge / cut vertex in a graph is an edge / vertex which, when deleted, disconnects the graph

Examples:

Connected, no
cut-edges/vertices

strongly
conn.

weakly conn.
since no path from
y to e.g. v

disconnected

connected
cut-vertices: u, x
cut-edge: f
