Recall:

Def: The Prüfer (ode f(T) = (a1, -, an-2) of T is given by the following algorithm:

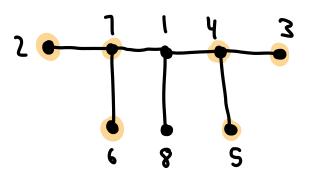

At step i:

- delete the leaf w/ the smallest label
- a; is the label for the lunique) neighbor of the leaf

Ex:

Can go backwards:

Cayley's Formula (Thm 2.2.3): There are nn-2 labelled trees with n vertices

Pf: n=1 good

We prove that for n ? 2

 $T \longleftrightarrow Pru(T)$

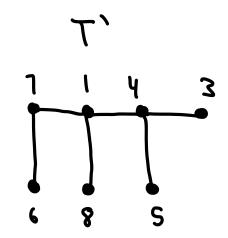

is a bijection.

Base case: n=2

ength zero

Inductive step: n>2.

Cor 2.2.4: Let $d_{1,-}, d_{n} \in \mathbb{Z}_{\geq 1}$ s.t. $d_{1} + \cdots + d_{n} = 2n-2$. Then the number of trees ω / label set $\{1,-,n\}$ s.t. vertex i has degree d_{i} is $\frac{(n-2)!}{\prod (d_{i}-1)!}$

Pf sketch: Look at how many times i appears in Pru(T)

Further question: How many spanning trees does a graph G have?

T(G) := number of spanning trees of G

Cases we know so far:

Def'n

Cor 2.1.5

Cayley's Formula

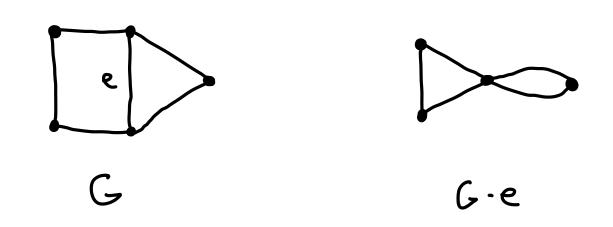

Matrix Tree Theorem (2.2.12) T(G) can be given as the determinant of a certain matrix.

Need a recursive tool first:

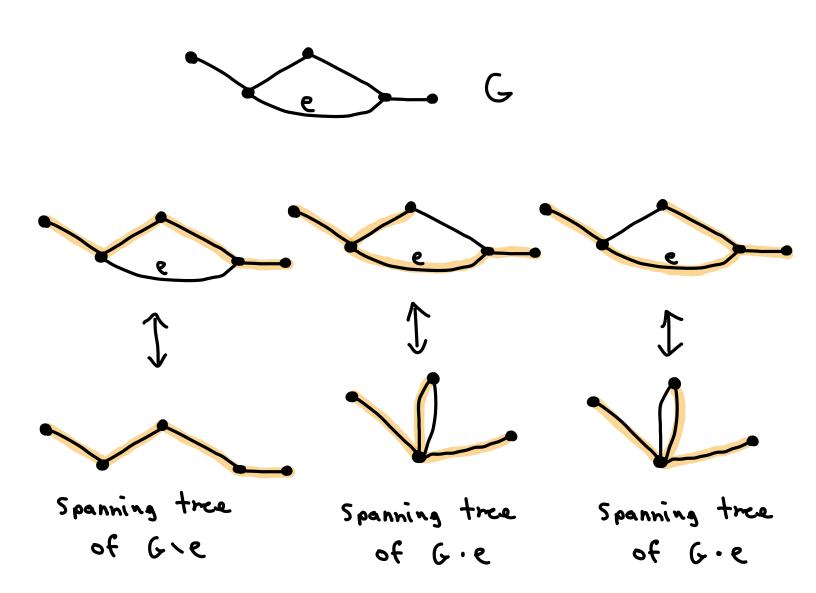

Def 2.2.7: Let $e \in E(G)$ have endpoints u and v.

The contraction $G \cdot e$ is the graph obtained from G by replacing u and v with a single vertex whose incident edges are the edges other than e that were incident to u or v.

Class activity: Find G.e

Prop 2.2.8: If e is not a loop, then $T(G) = T(G \cdot e) + T(G \cdot e)$

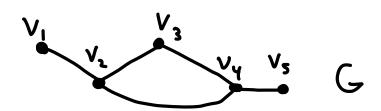

Def:

- a) The degree matrix D(G) is the diagonal matrix with (i,i)-entry equal to d(vi)
- b) The Laplacian matrix of G is the matrix

$$L(G) = D(G) - A(G)$$
adjacency
matrix

c) The reduced Laplacian Li(G) is L(G) with the ith row and column deleted

D(C)

A(6)

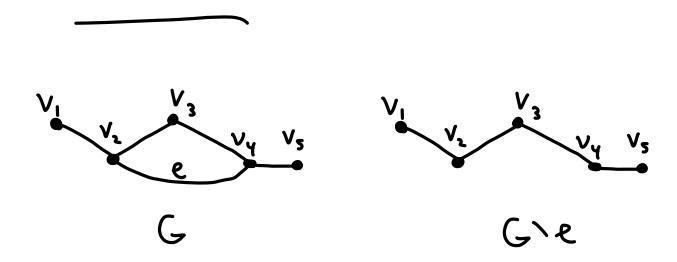

L(G)

$$\begin{bmatrix} 3 & -1 & -1 & 0 \\ -1 & 2 & -1 & 0 \\ -1 & -1 & 3 & -1 \\ 0 & 0 & -1 & 1 \end{bmatrix} \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 2 & -1 & 0 \\ 0 & -1 & 3 & -1 \\ 0 & 0 & -1 & 1 \end{bmatrix} \begin{bmatrix} 2 & -1 & 0 \\ -1 & 3 & -1 \\ 0 & -1 & 1 \end{bmatrix}$$

$$\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 2 & -1 & 1 \\ 0 & 0 & -1 & 1 \end{bmatrix}$$

Matrix Tree Theorem: For any loopless graph G, and for any i,

Pf (Godsil-Royle, Algebraic Graph Theory):

$$\begin{bmatrix}
1 & -1 & 0 & 0 & 0 \\
